Digital Literacy Awareness Report:

Name: Jaya Dubey
Reg. No.- 25BET10018
Branch: B.Tech CSE (Education Technology)
Year: First
Course Code: CSE0001
Date: 28/03/2026

Introduction— Brief overview of the project and the scenario

I made this digital literacy portfolio because I am a student digital ambassador. My job is to help my friends use tools in a good way. The project has five parts: making a presentation making profiles that look professional using digital platforms learning about email etiquette and looking at a cybercrime case study.

Each part shows that I can do things and that I think about being safe and good when I'm online.

I put all my work in one place on GitHub so it is easy to look at. This portfolio shows that I can use the internet with confidence and that I care about being professional communicating well and being safe from cybercrime.

It shows that I have learned a lot, about technology and that I try to be responsible when I'm online.

Digital Literacy Awareness Report:

Task 1 report:-

- I made an infographic about digital illiteracy for students in Canva for this project. I chose Canva due to its ease of use, and it has helped me transform my ideas into a neat and visually appealing design without hassles.
- In my infographic, I covered five areas:
  What is digital literacy?
  It includes useful digital tools for students, safe internet practices, maintaining a professional online presence, and proper email etiquette. I aimed for a simple layout that divides the content into sections so that whoever is reading it will be able to easily understand the points.
- My design aims to convey the message that using technology means not just using the devices but also being responsible and safe while using them. Similar content will give teachers the tools to improve the writing skills of their students and get a lot done.
- I had to arrange everything in a planned manner so that the design does not look jam-packed. I had fun editing them, notwithstanding the fact that they made my real work thought-provoking, because I got very creative and learned how to present information better.

Task 2 Report:-

Platforms Setup, Purpose, and Future Plan, LinkedIn & GitHub

I have set up my profiles on LinkedIn and GitHub to help me grow in my studies and career.

LinkedIn is where I build my profile, connect with friends, advisors, and people in my industry, and keep up with the latest in technology and job news.

I use it to share my accomplishments, certificates, and projects, and to read articles related to my field.

GitHub is my tech portfolio where I store and manage my coding projects.

It helps me see how far I've come in working with others and shows that I can code and develop.

By keeping my project records clear, I want to make my work easy for others to understand.

In the future, I plan to join in on open-source projects on GitHub and make connections on LinkedIn by joining conversations and sharing what I know.

I also want to create a portfolio that shows my skills and consistency, which will help me get internships and jobs in tech.

Task 3 -A – Coding Platform Practice

Coding platform practice task 3

To do this task, I make an account on Hackerrank for practicing simple programs. After signing up and creating my profile, I headed straight for the beginner section and attempted the challenge “Solve Me First” which focusses on basic input and output

I wrote a simple program that takes two numbers as inputs and returns the sum to complete the challenge successfully. Through this I learnt about the platform interface and coding problems structure. Upon task completion, I received a score and confirmation of the submission.

Next, I took a screenshot of my completion of the challenge with my score/badge and saved it in the required folder: task-3-platforms/.

Task 3 -B <u>Digital</u> <u>literacy</u> <u>quiz.</u>

To complete this task, I designed a Digital Literacy Awareness Quiz for my batchmates using Google Forms. The form contained exactly five questions which were of multiple-choice and short-answer form. The questions specifically focused phishing

awareness, safe password practice, and responsible online behaviour, etc. As a result, I learnt to design simple and effective assessments.

I connected my quiz to Google Sheets after preparing the quiz so responses get recorded automatically. After that, I screenshot the form and response sheet (to show how data is recorded) and saved them in the specified folder: task-3-platforms/. The link for the form has also been shared in my README file.

The use of these platforms enhanced my skill of organizing digital content and analyzing responses. These tools will help me academically in terms of surveys, feedback collection, and data representation, and so on, for future projects and assignments.

Task 4 A Email Etiquette And Social Media Awareness Report

To complete this task, I practised formal communication through an email to a professor asking for an assignment extension and an email to the internship coordinator for a summer internship. When I was writing these emails, I kept in mind their structure; proper subject line, a respectful greeting, organized content and polite sign-off. It helped me learn the importance of tone clarity and professionalism while communicating digitally.

Furthermore, I drafted a checklist entitled Social Media Do’s and Don’ts, which focuses on responsible online behavior such as maintaining privacy, checking facts before sharing and avoiding abuse. This activity enhanced my knowledge about online responsibility and ethics.

Social Media Do’s and Don’ts Checklist

✔️ **Do’s**

- Protect your privacy – Keep personal information like phone numbers, address, and passwords secure.
- Think before you post – Consider how your content might affect your reputation.
- Verify information before sharing – Make sure news or posts are from reliable sources.
- Use respectful language – Communicate politely and responsibly with others.
- Maintain a positive digital footprint – Share meaningful, constructive, and appropriate content.

Don’ts

- Don’t overshare personal details – Avoid posting sensitive or private information.
- Don’t spread misinformation – Reposting unverified content can mislead others.
- Don’t engage in online conflicts – Arguments or negative comments can harm your image.
- Don’t click on suspicious links – They may lead to scams or phishing attacks.
- Don’t post inappropriate or offensive content – It can affect your academic and professional life.

I also thought of a case with unclear or incomplete messages that led to misunderstandings/missed opportunities because of poor communication. All in all, it enhanced my communication skills which will help me academic in writing professional emails, teamwork, and remaining positive in the digital world.

Task 4B Cybercrime Awareness Case Study & Prevention Guide

One instance where bad digital communication leads to genuine issues is a group project. For instance, one person on the team might send a vague “I’ll do the presentation” message not specifying what they will do or when. Other members might make assumptions that could lead to incomplete work or last-minute issues before submission.

This causes the project to be less efficient overall and it stresses out team members.

With clearer and more detailed communication, we could have avoided this issue. The assignment should have specified their roles, deadlines, and progress updates. It might help everyone to ensure that the members of the group understand your instructions clearly. In a collaborative business environment, communication is essential to avoid miscommunication, misunderstanding and things going awry.

Task 5 A- Phishing Attack Case Study

Cybercrime is Phishing which is when an attacker tricks someone into revealing sensitive information like password, bank details, OTPs etc. by pretending to be a trusted entity.

A phishing attack usually starts with the victim receiving an email or message from what appears as a legitimate source, any bank, or a well-known company. A message typically generates a sense of urgency, for example, claiming that the user's account will block without immediate action.

The victim is then asked to click on the link which directs the person to a fake website that is a replica of the original. After entering their login credentials or financial information, the user's data is captured by the hacker. Sometimes, they may even be asked to download files with malware.

People who are not likely to check the authenticity of message include students, working class people, elderly people, etc. Severe consequences can occur, such as financial loss, unauthorized transaction, identity theft, and loss of personal data. Prevent this type of cybercrime by verifying the authenticity of the sender, never clicking on links from suspicious sources, using two-factor authentication, and being aware of scams.

Task 5 Part B

College Student Safety Checklist for Staying Safe When Going Online

<u>General Safety Recommendations</u>

- Choose a strong password for every single one of your accounts and update it frequently.

- Whenever possible, use two-factor authentication.

- Links in emails, text messages, social media, etc., should not be clicked on unless you are sure of who they come from.

- Before giving out personal or academic information to anyone online, confirm that they are actually who they say they are.

- Always ensure that your devices are current with software updates and have an updated antivirus program.

- Do not log onto any sensitive accounts (banking) while using public Wi-Fi.

Financial Safety & UPI

- If someone claims they work at a bank, never share your UPI PIN, your OPT, or your bank details with them.

- Verify multiple request amounts before accepting them via Google Pay, PhonePe, etc.

- Do not scan an unknown QR code or accept an unanticipated collect request.

- Before you accept or reject a payment, verify the details of that payment.

Cyber Crime Reporting

- Immediately report any suspicious activity you may see online at the Cyber Crime Portal: (www.cybercrime.gov.in), or if in an emergency due to potential financial fraud. Call the Cyber Crime Helpline (1930) as soon as possible.

📚 *Reference Books*

1. Cyber Security & Digital Awareness – Shruti Dalela & Preeti Dalela
    - A very relevant book for students that covers cyber threats, digital literacy, online behavior, and safety practices.
2. Computer Security Literacy: Staying Safe in a Digital World – Douglas Jacobson & Joseph Idziorek
    - Focuses on practical topics like passwords, email safety, and online threats in everyday life.
3. The Basics of Cyber Safety – John Sammons & Michael Cross
    - A beginner-friendly guide explaining internet safety, malware, and secure browsing.
4. Cyber Literacy for the Digital Age – Lisa Mulka
    - Covers topics like cyberbullying, identity theft, and responsible social media use with real-life examples.

Overall Conclusion

Through participating in the digital literacy and online safety project, I gained a better understanding of how to use digital technologies. I had opportunities to practice different types of communication and content creation, such as creating professional email accounts and designing quizzes using Google Forms. Additionally, I experienced several technical skills through coding challenges found on HackerRank.

In addition, I learned about different types of cyber crimes, including phishing scams and online fraud. More importantly, I learned that basic precautions could be taken to help avoid negative consequences as a result of engaging in cyber crimes. Creating checklists and case studies provided me with a higher degree of awareness about what constitutes safe and ethical digital behavior while engaging in online activities.

Overall, this project has helped to increase my confidence in learning how to navigate the digital world. It has also encouraged me to improve my online behavior by being more careful, responsible, and thoughtful when interacting with others, whether academically or otherwise, using digital technologies.
